

Writing Report.

Analysis summarized:

According to the dataset we can conclude that Charter schools have better performances than district schools. Also we can notice that even though Charter schools on average have a lower budget per student, have higher performance. When analyzed based on school size, we can see that schools smaller in size have a better performance, even though there is a drop in medium schools, still their overall performance is a lot better than large schools.

Two correct conclusions or comparisons:

- 1- It is a fact that schools, smaller in size better in performance, regardless per student budget. This shows that the size of the school population is a key factor on how the teaching is conducted effectively.
- 2- Another element is that draws the eye is that increasing the budget on larger schools, as a strategy for improvement not necessary will conclude in increasing their performance .
